

## IMO 2007

## Ha Noi, Vietnam

#### **Day 1** - 25 July 2007

1 Real numbers  $a_1, a_2, \ldots, a_n$  are given. For each  $i, (1 \le i \le n)$ , define

$$d_i = \max\{a_j \mid 1 \le j \le i\} - \min\{a_j \mid i \le j \le n\}$$

and let  $d = \max\{d_i \mid 1 \le i \le n\}$ .

(a) Prove that, for any real numbers  $x_1 \leq x_2 \leq \cdots \leq x_n$ ,

$$\max\{|x_i - a_i| \mid 1 \le i \le n\} \ge \frac{d}{2}.$$
 (\*)

- (b) Show that there are real numbers  $x_1 \leq x_2 \leq \cdots \leq x_n$  such that the equality holds in (\*).
- [2] Consider five points A, B, C, D and E such that ABCD is a parallelogram and BCED is a cyclic quadrilateral. Let  $\ell$  be a line passing through A. Suppose that  $\ell$  intersects the interior of the segment DC at F and intersects line BC at G. Suppose also that EF = EG = EC. Prove that  $\ell$  is the bisector of angle DAB.
- 3 In a mathematical competition some competitors are friends. Friendship is always mutual. Call a group of competitors a *clique* if each two of them are friends. (In particular, any group of fewer than two competitions is a clique.) The number of members of a clique is called its *size*.

Given that, in this competition, the largest size of a clique is even, prove that the competitors can be arranged into two rooms such that the largest size of a clique contained in one room is the same as the largest size of a clique contained in the other room.

#### **Day 2** - 26 July 2007

- In triangle ABC the bisector of angle BCA intersects the circumcircle again at R, the perpendicular bisector of BC at P, and the perpendicular bisector of AC at Q. The midpoint of BC is K and the midpoint of AC is L. Prove that the triangles RPK and RQL have the same area.
- 5 Let a and b be positive integers. Show that if 4ab 1 divides  $(4a^2 1)^2$ , then a = b.
- $\boxed{6}$  Let n be a positive integer. Consider

$$S = \{(x, y, z) \mid x, y, z \in \{0, 1, \dots, n\}, x + y + z > 0\}$$

as a set of  $(n+1)^3 - 1$  points in the three-dimensional space. Determine the smallest possible number of planes, the union of which contains S but does not include (0,0,0).
